SUMMARY

Final-year B.Tech IT student with strong CS fundamentals (OOP, Data Structures, OS basics) and hands-on experience building scalable backend software using Python (FastAPI), Java, and PostgreSQL. Proficient in the software development lifecycle, utilizing Docker, Git, and Linux environments. Eager to leverage strong algorithmic problem-solving skills and backend API expertise as an SDE Intern to build reliable, high-performance software systems.

TECHNICAL SKILLS

- **Languages:** Python, Java, SQL
- **Backend & APIs:** FastAPI, REST APIs, Client-Server Architecture, Background Tasks
- **Databases:** PostgreSQL, SQLite, Redis
- **CS Fundamentals:** Object-Oriented Programming (OOP), Data Structures & Algorithms, OS Basics (Processes, Threads), Networking (HTTP, TCP/UDP)
- **Tools & Infra:** Git, Linux Command Line, Docker, AWS S3, RabbitMQ

EXPERIENCE

Software Developer Intern | *VILS AIT Pvt Ltd* Apr 2026 – Jun 2026

- Built and maintained backend services in Python (FastAPI), designing database schemas and integrating REST APIs for robust client-server architecture.
- Debugged system issues end-to-end via the Linux command line, managing background processes and resolving integration bugs.
- Authored clean, maintainable code and modified existing codebases, utilizing Git for strict version control across all testing and deployment cycles.

PROJECTS

Asynchronous-Resume-Scoring-API | *Python, FastAPI, PostgreSQL, Docker* Live | GitHub | 2026

- Designed scalable REST APIs and background tasks to process unstructured data, actively reading and modifying existing codebases via the Linux command line.
- Designed relational database schemas in PostgreSQL to handle high-volume data inserts, writing efficient SQL queries and utilizing Docker for containerized deployment.
- Implemented strict error handling and HTTP status code management to ensure reliable client-server communication.

Event-Driven Notification System | *Python, FastAPI, RabbitMQ, PostgreSQL* GitHub | 2026

- Created an automated Python pipeline that uses REST APIs to send JSON payloads to message brokers, allowing background workers to process backend data independently.
- Conducted validation and testing to solve a critical data loss bug, tracking down how the broker acknowledged completed tasks to ensure absolute data integrity.

In-Memory LRU Cache | *Java, Data Structures, Algorithms* GitHub | 2026

- Leveraged strong CS fundamentals in Data Structures and OOP to build a Java-based LRU Cache, demonstrating a deep understanding of memory management.
- Engineered custom Circular Doubly Linked Lists and HashMaps to guarantee strictly O(1) time complexity for all referencing and eviction operations.

EDUCATION

B.Tech Information Technology | *Sreenidhi Institute of Science and Technology* **CGPA: 8.34** | 2026

ACHIEVEMENTS

- 140+ Data Structures & Algorithms problems solved on LeetCode.
